Great Strides on the Robot!

This week the build sub-team made great progress towards completing the robot, by completing the drive base, putting the belly pan in, and beginning to install the electronics.

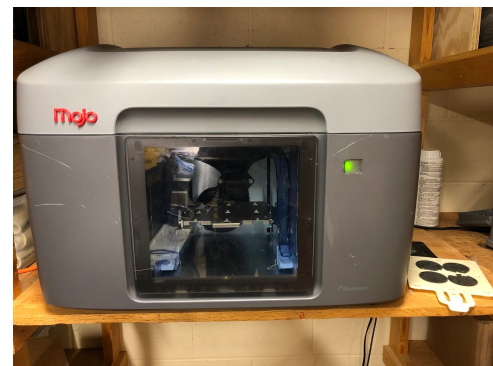

In related build team news, on Thursday we were loaned a 3D printer that we are able to keep in the shop, that you are able to see to the right. So far we have printed some spacers and pulleys, and are planning to continue to utilize this to expedite our building process.

We also received our order of fasteners from our returning sponsor Albany County Fasteners, for which we are thankful.

The electrical sub-team, in collaboration with the build team, put the power distribution panel in, (also known as the PDP) some motor controllers, along with some other electronic bits and bobs.

The marketing sub-team at the advertising firm.

The new 3D printer in its natural habitat.

This Friday the marketing sub-team went to an advertising firm to look at possibilities for a new logo. The firm presented us with 11 ideas, and the marketing team is planning to present some of the ideas on Thursday.

We are having an open house on Saturday, the first of February, and would love it if you came! It is going to run from 11 am until 1:30 pm in our shop, room

number N140. We are going to show our progress on the new robot, talk about the tools we use on a weekly basis and will be driving our outreach bot. We hope to see you there!
